

**Accelerate your
Agentic
Workforce with
Confidence**

Built by Constellation, for Constellation

Constellation Businesses deploying Agents with raia...

Why did we build raia?

Every organization is on a journey to become AI native. Most companies are in Phase 1 or Phase 2 today — using tools like ChatGPT / Claude.

Our focus is helping CSI deploy AI agents operate autonomously across the enterprise.

Security, Compliance, Agent Management, Core Services — this is why crossing the chasm is so hard without a platform.

The Big Decision: DIY vs Platform?

As you move from single-user tools to enterprise-wide deployment, the requirements for complexity and scalability increase dramatically.

raia is built specifically for the top-right quadrant: high customization and high scalability.

While personal agents and custom apps serve specific needs, raia provides the platform to scale complex, multi-user autonomous agents across the enterprise.

THE MODERN ENTERPRISE AI ECOSYSTEM FOR SOFTWARE COMPANIES

DIY vs. raia

Building DIY AI apps is great for personal use, but difficult to scale across an enterprise.

raia provides the infrastructure for complex workflows, security, and oversight while allowing custom DIY interfaces.

raia + DIY = Best of Both Worlds. You get the flexibility of custom UX with the power and security of enterprise agents.

DIY

- Fun to Build (hard to Support)
- Great for Personal or Small Team Apps
- Non-Devs limited to simple integrations
- No Trained Agents (General LLM only)
- Limited to internal use cases

raia

- Still can build DIY Apps (UX)
- Integrate easily with Trained Agents
- Supports Complex Workflows
- Scale, Security, and Oversight
- Built-in Copilot, Chat, & Command

PROCEED WITH CAUTION

The Hidden Risks of DIY & Workspace Agents

Without a platform, these risks compound silently — until they become costly problems.

RISK 01

"Prompt Decay"

System prompt instructions require ongoing management — versioning, updating, and testing. Like software, prompts must be maintained to ensure efficacy and quality output.

RISK 02

"Double Agent"

When everyone builds the same agent independently, it introduces confusion, duplicated effort, and reduced leverage across the organization.

RISK 03

"Training Debt"

Training documents and data fall out of sync over time. Agents accumulate knowledge gaps and lack the key information needed to perform effectively.

RISK 04

"Hallucination"

Without human feedback or active monitoring, an AI agent can't learn from human-in-the-loop correction — errors go undetected and compound over time.

RISK 05

"Token Burn"

As users deploy more agents, token usage increases with no way to monitor or track effectively — making it impossible to know if it's productive or wasteful spend.

RISK 06

"Zero Visibility"

The business has no ability to view all agents or conversations — real-time or via reports — with no AI auditing or escalation capabilities in place.

The “Brick Walls” you will hit deploying AI Agents at Scale

Converting your Knowledge into being AI-Ready

- Conversion of Documents (PDF, DOCX, XLS, HTML, etc) to native AI markdown.
- Applications (Ticketing / Knowledge Base) + Data Sources
- Managing the Pipeline from source of truth to AI Agent Workforce
- AI Classification and scanning of all documents to build strong knowledge graph.

raiä command

Testing AI Agents with Human Feedback and AI Simulations

- Simulate Conversations with AI Agent leveraging training data (Tickets, FAQ, etc)
- Allow Humans to Test and provide Feedback for reinforcement learning via Chat Interface
- Automated Update of Training in AI Agent.
- Escalation and Auditing Skills to review all conversations.

raiä copilot

Managing Agents at Scale to accelerate launching of workforce.

- Manage instructions, models, skills, access control in zero code platform.
- Monitor usage of all agents to manage tokens.
- Managing Access to Agents for teams who are managing or accessing agents.
- Track all conversations / prompts for compliance and security requirements.

raiä cx

Launching and Integrating Agents into your business.

- Ability to integrate agents into tools, workflows, all applications.
- Ability to launch agents easily via multiple human-user interfaces (Copilot, Live Chat, Email, SMS, etc)
- Zero-code platform to enable anyone on your team to build agents to boost productivity.

raiä cx + chat + copilot

Personal Agents vs. Enterprise Agents

Personal agents like custom GPTs or Claude Agents are excellent for individual productivity and simple task automation.

However, they lack the robust workflows, management, and compliance required for multi-user enterprise scenarios.

Enterprise Agents on raia connect via API, operate independently, and include built-in oversight and testing.

Personal Agents

(e.g., Copilot, Claude Agents)

- Connects to Personal Tools or Workspace
- Focuses on Personal Workflow
- Task automation vs autonomous action
- Not for Customer Facing Cases
- Not for Complex Workflows
- Not for "Enterprise" Use Cases

Enterprise Agents

(e.g., raia)

- Connects to Systems via API
- Robust workflows (not just tools)
- Independent of specific person
- Built-in management & compliance
- High level of Training / Testing
- Multi-User & Customer facing

Where They Overlap and Where They Don't

All AI solutions add value, but only enterprise agents handle secure, autonomous business workflows at scale.

CAPABILITIES	Tools (e.g., ChatGPT)	Personal Agents (e.g., Custom GPTs)	Enterprise Agents (e.g., raia)
Human Prompt-Driven e.g., analyze and summarize documents.	✓	✓	✓
Autonomous Workflows Multi-step independent processes.	✗	✓	✓
Multi-User Support External customer & team interaction.	✗	✗	✓
Control & Oversight Usage, conversation, & security monitoring.	✗	✗	✓
Scale & Simplicity Integrated RAG & multi-tool support.	✗	✗	✓

Enterprise Agents are the only solution built to handle autonomous, multi-step business processes securely at scale.

THE BREAKING POINT

Where Workspace Agents Stop — and Enterprise Agent Platforms Begin

USE CASE COMPARISON

PERSONAL AGENT

Meeting Prep Assistant

An employee connects to SharePoint, pulls in relevant documents, and builds a personal agent that analyzes those documents and generates a summary report for their upcoming meeting.

REQUIREMENTS

- ✓ Faster to implement
- ✗ Limited shareability
- ✗ No formal testing/training
- ✗ No external system access
- ✗ Requires manual prompting
- ✗ No workflow integration

ENTERPRISE AGENT

Autonomous Support Agent

An AI agent trained on 1,000+ KB articles answers support tickets autonomously via Live Chat, integrates with 3rd party SaaS (e.g., Zendesk), and is launched as Live Chat on the company website.

REQUIREMENTS

- ✓ Testing and training time
- ✓ Collaborative human feedback
- ✓ Access any system in workflow
- ✓ Multi-channel accessibility
- ✓ Autonomous operations

KEY DIFFERENTIATORS

01 Knowledge at Scale

Large, evolving KBs

02 Cross-System Access

Beyond workspace apps

03 Multi-Channel

API, chat, SMS, email, voice

04 Shared Agent Access

Teams & customers

05 Governance & Security

Permissions, compliance

06 Human-in-the-Loop

Monitor, intervene, take over

07 Workflow Execution

Actions, triggers, automations

08 Testing & Improvement

Feedback, optimization

09 Multi-Agent Ops

Beyond one assistant

10 Branded Experiences

Custom front-ends

Why Build everything from Scratch?

1

Agent Build & Lifecycle

- No-code agent builder
- Templates, cloning, versioning
- Multi-agent management
- Launch & rollback controls

2

Knowledge & Training

- File ingestion processing
- OCR & metadata enrichment
- Vector store management
- External sync & updates

3

Channels & UX

- Web chat & SMS
- Email & Voice
- Branded experiences
- Embeddable agents

4

Actions & Skills

- Webhooks & APIs
- CRM & Tool integrations
- Native agent skills
- n8n workflow integration

5

Human Oversight

- Human-in-the-loop takeover
- Escalation & notifications
- Sandbox testing
- Continuous improvement

6

Monitoring

- Real-time dashboards
- Agent analytics
- Usage tracking
- Logs & traceability

7

Security & Compliance

- RBAC & Access controls
- Audit trails & logs
- SOC 2 / HIPAA / GDPR
- Policy enforcement

8

Enterprise Scale

- Multi-agent control
- Shared governance
- Implementation support
- Operating model design

Focus Your Developers Where It Matters

Your developers' time is your most valuable asset. Don't spend it building what a platform already provides.

01

Build AI Into Your Products

Developers should be focused on embedding AI capabilities directly into your core products.

02

Agents Don't Need Devs

Support, sales, and ops agents can be built and managed by business teams on a platform.

03

Managed = Less Stress

Your team isn't responsible for building, maintaining, monitoring, and scaling infrastructure.

WITHOUT A PLATFORM

- ✗ **Support agents:** Built from scratch
- ✗ **Sales agents:** Manual CRM hooks
- ✗ **Ops agents:** Manual monitoring
- ✗ **Maintenance:** Devs debug & scale
- ⚠ **AI roadmap is deprioritized**

WITH RAIK PLATFORM

- ✓ **No-code agents:** Built by business
- ✓ **Sales agents:** Guided setup
- ✓ **Workflow:** Monitoring included
- ✓ **Managed:** Raik handles ops
- ★ **Devs focus 100% on product AI**

You already have a platform - why build it?

raia is not an outside vendor — it is a Constellation company. That means alignment with how CSI operates, long-term commitment, and a platform that will never go away.

**Only Platform used by CSI
Corporate and business units in
every Operating Group**

01

No Building from Scratch

raia provides the platform so your teams focus on deploying agents, not building infrastructure.

02

No Vendor Lock-In

As a CSI company, raia ensures you own your AI agents, workflows and training.

03

Collective Power of CSI

Every agent, workflow, and integration built across Constellation strengthens the platform for everyone. 100+ business units contributing to a shared ecosystem.

04

Built to Last

raia is a Constellation company. It is not a startup that might disappear. It is built by CSI, for CSI, and will always be here.

Accelerate Your Agentic Workforce

raia's primary objective is to accelerate the deployment of autonomous AI agents that deliver 10x productivity gains.

It is not the only AI solution you will use — and it is not meant to be.

"raia is not a tool. It is a platform that lets you deploy AI agents faster and with confidence."

01

Continue Using AI Tools

Your teams will keep using Claude, ChatGPT, and other tools for personal productivity. raia is additive to that strategy.

02

Platform, Not a Point Solution

raia provides the infrastructure, security, and management layer to go from experimentation to enterprise-grade deployment.

03

Primary Objective: 10x Productivity

Launch autonomous agents that handle support tickets, process documents, manage workflows, and operate 24/7.

Every Agent Starts Enterprise-Ready

Every agent you launch on raia comes with all core enterprise capabilities built in. You provide the instructions, training data, and workflow connections.

AGENT IN ACTION

Autonomous operation across
Support,
Sales, Operations, Legal, R&D

YOUR CONFIGURATION

Instructions | Training Data |
Workflow Integrations

CORE PLATFORM LAYER

Security | Compliance | Monitoring |
Multi-Model | API Access

Why you need an Agent Management Platform

Sales

- Lead qualification
- Account research
- Personalized follow-up
- CRM updates

Marketing

- Content creation
- Audience segmentation
- Lead scoring
- SEO content ops

Success

- Onboarding
- Health monitoring
- Renewal risk detection
- Expansion identification

Support

- Ticket triage
- Case routing
- Bug reproduction
- Multilingual support

Operations

- SOP execution
- Workflow orchestration
- Vendor coordination
- Reporting

Finance

- AP / AR support
- Invoice processing
- Collections outreach
- Budget variance

HR / People

- Recruiting coord.
- Candidate screening
- New hire onboarding
- Policy Q&A

Engineering

- Code generation
- Test generation
- Bug triage
- DevOps support

Legal

- Contract review
- Policy monitoring
- Audit preparation
- Vendor risk review

We Empower Your Team to Build Agents

The goal is to make your team self-sufficient in building, training, and managing AI agents. raia provides professional services to help you deploy your first agent so your team learns the process hands-on.

1

Onboard

Sign up for the raia platform and get access to the full application suite.

2

Deploy First Agent

raia professional services helps you build and launch your foundation agent.

3

Train & Test

Your team learns the process of training and refining agents with real interactions.

4

Scale

Your team builds and deploys additional agents across various departments.

*"Learning to train, test, and integrate AI agents is a new process for most teams.
We walk alongside you until you are confident."*

Get Started with raia

Getting started is straightforward. Sign up for the platform, engage our team for your first use case, and build a long-term partnership.

01

Sign up

Get access to the full raia CX suite and begin exploring the capabilities of the platform.

02

First Use Case

We help you build and deploy your key foundation agents, ensuring a smooth knowledge transfer to your team.

03

Partnership

Influence the raia road map and gain access to shared agents built across CSI. We are an extension of your business.

Have more Questions? Visit docs.raiaai.com

Simple, Usage-Based Pricing

raia offers unlimited seats and unlimited agents. No per-user fees. No per-agent fees.

Our pricing is based on actual usage — so you pay for what you consume.

Built-in token management ensures you maximize every dollar spent on AI consumption.

Platform Fee

\$1,000 / mo

- Unlimited agents & seats
- Full raia CX suite (Chat, Copilot, Command, Control, Contract)
- All applications or shared agents built on raia.
- No upgrade costs for new features / versions.

Usage Plan

Based on Token Volume *

- 100M+ tokens per month (depends on models used)
- Tokens are required for Training and Use of Agents
- Includes all costs (Conversion, Training, API, Storage, Compute, etc)
- Token Management and Managed Services / Monitoring included

(* price lowers at scale)

Professional Services (if required)

\$50/hr

CASE STUDIES

Real-world impact of raia across Constellation Software

CASE STUDY

CSI Corporate Accounting

DEPLOYMENT

raia CX

Leveraging raia Chat and raia Copilot as the primary user experience.

SCALE

530 Users

Deployed across all of Constellation Software Inc.

ROI CALCULATION

2,000+ Hours

Saved in just 6 months. Equating conversational hours directly to human time saved.

Independent Review by PwC

Highlights from Price Waterhouse Coopers' evaluation of Agent Conversations

High Technical Accuracy

Consistently generated outputs aligned with IFRS standards and CSI's internal accounting policies.

Excellent Clarity & Structure

Responses were clear, well-organized, and professionally written with easy-to-follow rationale.

Effective Guidance Extraction

Strong ability to extract relevant information from specified knowledge bases (CSI Policies, KPMG Guide).

Strong Synthesis Capabilities

Successfully synthesized complex accounting guidance to directly address presented scenarios.

Defensible Accounting Application

Reliably performed scope assessments and identified relevant exceptions and policy choices.

CASE STUDY

TSS M&A Agent

SCALE

200 Users

Deployed across TSS Portfolio M&A, Finance, and Business Development teams.

ROI CALCULATION

500+ Hours / Month

Estimated human time saved per month. Acting as an intelligence multiplier for M&A activity.

We are highly satisfied with the results of the pilot and recommend further continuation of Skynet (with RAIA), expansion of functionality and embedding within our M&A, M&A Legal and BD organization.

Nikola Curak

DESCRIPTION OF USE CASE

TSS has built an Agentic Workforce to operate as a CIO role for the organization. The agents are trained on their portfolio, best practices, playbooks, PAR/DD/IM reports and other sources to be able to provide insights, strong advice as well as evaluate new opportunities and provide guidance to the M&A team.

Click Dimensions

RESOLUTION RATE

86.5%

Zero live human escalations. 365 of 422 chats handled end-to-end by raia.

TIME SAVED

8,035 Minutes

Equal to about 134 hours of support time saved in just 7 weeks.

WORKFORCE IMPACT

2 FTE Equivalent

The time savings equate to the output of 2 full-time employees.

“

Working with raia has been excellent. With their support, we've been able to rapidly grow our AI workforce while upskilling our own team. In just a few months, we deployed seven AI agents across multiple teams, and their platform and expertise were key to getting our AI workforce and AI solutions team started on the right foot.

Weston Packard

Support Operations Engineer, clickdimensions.com

Ideal Software

SCALE

800+ Users

Active customers leveraging the AI agent for rapid support and issue resolution.

WORKFORCE IMPACT

3 FTE Equivalent

The time savings equate to the output of 3 full-time employees, preventing the need to scramble for new hires when team members left.

“

Raia has made our lives a lot easier. It now resolves our chat tickets, responds in less than two seconds, and gives customers quick answers while freeing our team to focus on more complex issues. Because Raia was resolving so many tickets, we weren't scrambling to hire when team members left.

I would recommend Raia for two reasons: first, because it works, and second, because of the people behind it.

Shireen Ferozepurwalla

Support Manager - OPE, idealcomputersystems.com

Newline

SCALE & ADOPTION

4 Agents & 290 Users

WORKFORCE IMPACT

4 FTE Equivalent

USE CASE

At Newline, the team has built an agentic workforce to automate tasks and business functions. The most notable use cases are in support building AI Agents trained on their knowledge base and code.

“

As we build more AI-powered products, having RAIA gives us a proper platform to connect our tools and scale intelligently. I'd recommend RAIA to any organisation that's serious about embedding AI into their workflows. They're experts in the space and the system is easy to use. It's helped us move from experimenting with AI to actually operationalising it across the business.

Richard Partridge

COO, Newline

CrossCap

USE CASE

At Crosscap, the team is building agentic solutions for their internal teams for automated tasks across all business functions, and also incorporating into their products to increase speed-to-market and provide AI-powered solutions to drive new sales.

”

raia has been a game changer for our business and how we are transforming into an AI-first company.

Tom Carluccio

Product Manager, CrossCap

CX Product Suite

The raia CX Suite: Product Deep Dives

Our Suite of Products

raiaCX

The core platform and suite that powers enterprise-grade autonomous AI Agents.

Built for accelerating the launch of your Agentic Workforce and ongoing oversight and management.

raia Command

The AI knowledge center for managing agent data, converting documents to being AI ready, and connecting third-party data sources.

raia Copilot

The internal interface for teams to test, train, monitor, give feedback on, and apply human-in-the-loop oversight to AI Agents.

raia Control

Used to launch outbound campaigns, especially SMS and email missions targeting customers, prospects, or team members.

raia Chat

The customer-facing interface where users engage with AI Agents through Web Chat, SMS, Email, or Voice.

Your AI Agent Workforce Center

The central hub for building, managing, and monitoring your entire AI ecosystem. Design, organize, and track agents from one place.

Build & Manage Agents

- Create, configure, and deploy your AI workforce
- Define agent personalities, skills, and behaviors

Knowledge Packs

- Pre-built and custom training content for agents
- Assign packs to specific agents to scope expertise

Custom Functions

- Extend agent capabilities with webhooks and APIs
- Create functions for data lookups and automation

Conversations & Monitoring

- Real-time visibility into agent interactions
- Track quality scores and engagement metrics

System Logs & Debug

- Detailed diagnostics for every agent action
- Inspect system logs to troubleshoot behavior

Users & Permissions

- Manage access, roles, and team collaboration
- Control who can create, edit, or deploy agents

Human-in-the-Loop

Scale Human Expertise 10× Through AI-Human Collaboration. Monitor, test, intervene, and continuously improve your AI agents from a single intuitive interface.

10× Human Scale

One expert can influence thousands of interactions per day instead of 20–30.

Risk Mitigation

Proactive testing, real-time monitoring, and reactive intervention to protect quality.

Continuous Learning

Feedback from every interaction drives immediate agent improvement.

Full Visibility

Complete analytics across all interactions, channels, agents, and performance.

Omnichannel Conversation View

Unified view across Web Chat, SMS, Email, Voice, and Copilot with timestamps.

Admin Mode & Debugging

Full transparency into agent reasoning, knowledge chunks, and thought process.

Human-in-the-Loop Takeover

Step into live conversations, maintain full context, and return control seamlessly.

Simulation & Testing

Run test conversations with configurable context before production deployment.

RAIA CHAT

Omnichannel AI Chat

Deploy intelligent, branded conversational experiences on Web, SMS, Email, and Voice — all from a single agent configuration.

Web Chat

Embeddable widget for any website with a simple code snippet. Fully customizable appearance, rich media support, and persistent message history.

SMS

Two-way text messaging via Twilio. Threaded conversations by phone number with automatic message splitting and opt-out management.

Email

Send and receive emails via dedicated domain. AI generated message, threaded conversations, and full deliverability optimization.

Voice

Inbound and outbound calls with speech-to-text and text-to-speech. Natural dialogue, call transfers, and full transcription.

ALWAYS ON

24/7 Availability

No shifts, no breaks. Same quality at 2 AM as 2 PM.

< 3 SECONDS

Instant Responses

Zero wait times, even during peak volume.

EVERY TIME

Consistent Quality

Same knowledge, tone, and accuracy across all interactions.

FULL CONTEXT

Seamless Handoff

Escalate to humans without losing conversation history.

Your AI-Powered Data Room

Leverage AI agents to analyze, classify, and extract insights from your data room documents automatically. Build a strong knowledge base for training your agents.

01

Upload

Drag and drop or use AI Smart Upload to organize.

02

Convert

Files converted to Markdown for AI readability.

03

Train

Build a searchable knowledge base in vector stores.

04

Analyze

Generate summaries, reports, and insights.

Data Room Management

- Upload any file type to convert to AI Ready
- Nested hierarchies & templates
- Real-time file status tracking

AI Agent Workflows

- Manual or automatic handling
- Project-specific agent assignment
- High-capacity batch processing

Reports & Analytics

- Full export (PDF, DOCX, Excel)
- Consolidated batch reporting
- AI-generated actionable insights

Security & Compliance

- Role-based access controls
- Critical action security locks
- Automated file type blocking

RAIA CONTROL

AI Outbound Campaigns

Launch AI-powered outbound campaigns that turn one-way broadcasts into two-way conversations — personalized, adaptive, and running at scale.

FROM MONOLOGUE TO DIALOGUE

TRADITIONAL OUTBOUND

- ✗ 5–10% open rates, 1–2% click rates
- ✗ Everyone receives identical messages
- ✗ Can't respond to questions or objections
- ✗ Transactional, no relationship building

RAIA CONTROL

- ✓ 40–60% response rates
- ✓ Every conversation is uniquely personalized
- ✓ Addresses objections and questions in real-time
- ✓ Dialogue builds trust and relationships

LAUNCH A MISSION IN FOUR STEPS

1

Create Campaign

Define your mission name, objective prompt, and choose which AI Agent will conduct the conversations.

2

Select Contacts

Upload contacts via CSV, pick from existing lists, or target individual contacts. Map fields for personalization.

3

Configure Messages

Choose AI-generated, standard, or contact-specific messages. Set follow-up sequences and timing.

4

Launch & Monitor

Send immediately or schedule for later. Track opens, clicks, replies, and engagement scores in real time.
